<p><b>Eggs</b></p>	<p>Pale blue 3 or 4 eggs A laying(eggs) in April-May Incubation, 23 à30 days, the babies fly away in 60 days then are accompanied 12 weeks</p>
<p><b>How to recognise</b></p> 	<p>These birds are aquatic, the average size is 45 cms and the biggest can reach 100 cms. These birdshave got a long neck, a powerful and hooked beak and white cheeks. We recognize them because they have a plumage with black and tanned reflection. They know how to go fishing and dive. They weigh from 1,5 to 3,5 kilograms. The female is smaller than the male</p>
	<p>Certain species are sedentary the others go towards the méditerranée to the Persian Gulf.</p>
	<p><i>When cormorans gather, we say that it is going to be windy there.</i></p>
