Size: around 13-15 cm

Plumage: has an orange breast, brownish or olive-tinged upperparts and a whitish belly.

The legs and feet are brown.

Habitat: lives in woods, forests, parks, or gardens.

Food: eats insects, spiders, seeds and berries.

Nest: builds its nest in holes everywhere in parks, wooden sites or gardens.

Eggs (colour, number): around 4 to 7 eggs in one nest ; they are a cream, buff or white speckled with reddish-brown colour.

Sedentary or migratory bird?

The Robin is a sedentary bird.

Passport

Name: the European Green Woodpecker

Vocalisation: gives loud calls (= yaffling) and a noisy 'kyü-kyü-kyü' while flying.

Size: measures 30-33 cm.

Plumage: has green upperparts, yellowish underparts, a red crown in males and all black in females.

Habitat: lives in small woodlands, hedges, old trees, edges of forests or grasslands (gardens).

Food: eats ants on the ground and insects.

Nest: makes a hole in a rotten tree to build its nest.

Eggs (colour, number): around 4 to 6 eggs in one nest; the eggs are white.

Sedentary or migratory bird?

The Woodpecker is a sedentary bird.

Passport

Name: the Northern Lapwing

Vocalisation: gives shrill calls (= peewit).

Size: is 29-32 cm long

Plumage: has rounded wings and a crest, short legs. It is mainly black and white, but the black is tinted green

Habitat: lives in cultivated lands, short vegetation habitats, swamps.

Food: eats insects and small invertebrates, but also seeds. So it is omnivorous.

Nest: the male makes a hole in the ground to build its nest.

Eggs (colour, number): around 3 to 4 eggs in one nest; they are brown.

Sedentary or migratory bird?
The Lapwing is a migratory bird.
