

Making paper

What we need:

- bigger sink
- 2 wooden frames of similar size (one frame covered with net)
- bowl for paper mass
- blender
- newspapers, waste paper, carton etc
- sponge

How to make

1. Tear waste paper and carton to pieces and leave in warm water to soak through.

2. Put soaked waste paper pieces into the blender, add water and start the blender. Mix it porridge like mass. You can also add different plants and coloured paper pieces to make the paper more interesting.

3. Put two frames on each other in the way that the net is between them.

4. Keep joined frames in the sink filled with water.
Attention! Water cannot flow over the edge of the upper frame

5. Pour mixed paper mass in the middle of the frame.

6. Spread it equally on the frame.

7. Take the frames with paper mass out of the water and let additional water to come out. Remove upper frame.

8. Turn the frame carefully over on a cloth.

9. Dry it carefully with the sponge.

10. Put the cloth with the paper to dry on solid surface. It is very good to dry it on the heated floor.
